

C1 - Context Diagram: AI-Enhanced Personal Finance Management System

This context diagram provides a high-level overview of the AI-Enhanced Personal Finance Management System, showing boundaries, external dependencies and how it interacts with users and external systems.

Primary Users

Individual Customer: Seeks a unified view of their finances, personalized insights, and goal management tools to improve their financial health. **Financial Advisor:** Accesses shared financial data (with customer permission) to provide expert guidance and personalized recommendations.

Core System Value Proposition

The AI-Enhanced Personal Finance Management System addresses key challenges in personal finance:

Financial Fragmentation: Unifies multiple accounts from different institutions
Decision Complexity: Simplifies financial decisions through AI-powered analysis
Personalization Gap: Tailors recommendations to individual circumstances

Financial Literacy: Delivers contextual financial education

Internal Components (In-house Development)

Authentication Service: Secures access to financial data through multi-factor authentication, ensuring data privacy and regulatory compliance. **AI Reasoning Engine:** Core intelligence that analyzes patterns, generates insights, and creates personalized recommendations based on customer data.

External Dependencies (Third-party Services)

Banking APIs: Data source for transactions, account balances, and banking information from multiple financial institutions (requires API contracts). **Investment APIs:** Data source for portfolio information and market data (subscription-based). **Credit Scoring Service:** Provides credit scores and history (pay-per-use model). **Financial News Service:** Delivers market news and economic indicators (subscription-based). **Financial Education Content:** Repository of educational materials (licensing costs). **Regulatory Compliance Systems:** Ensures adherence to financial regulations and data protection standards (mandatory integration).

Key Interactions

- **Individual customers** receive unified financial views, insights, and goal tracking
- **System delivers** notifications, alerts, and personalized recommendations to customers
- **Financial advisors analyze** customer situations and provide data-driven advice
- **System consumes** data from multiple external sources to enable comprehensive analysis

Business & Development Considerations

Value Delivery: The core system transforms fragmented financial data into actionable insights and recommendations. **Development Focus:** Key components include secure authentication and AI reasoning capabilities. **Cost Centers:** External APIs and services represent ongoing operational costs through subscriptions or usage fees. **Integration Complexity:** Multiple third-party dependencies require careful management of API contracts and data flows.

Functional Requirements by Module and Actor

Integration Module

ID	Requirement Description	Actors Involved	Priority	Sponsor De-livery	Public Re-lease
FR01	The system shall demonstrate simulated connection to banking APIs (mocked data)	Individual Customer, Banking APIs	Essential	S1	R1
FR07	The system shall connect to real banking APIs (replacing mocked data)	Individual Customer, Banking APIs	Essential	S3	R1
FR10	The system shall consolidate data from multiple financial institutions into a unified view	Individual Customer, Banking APIs, Investment APIs	Essential	S3	R1
FR14	The system shall integrate with credit scoring services for financial health analysis	Individual Customer, Credit Scoring Service	Important	S4	R2
FR18	The system shall access and interpret market data and relevant financial news	Individual Customer, Financial News Service	Important	S5	R2
FR27	The system shall offer cryptocurrency portfolio tracking and analysis	Individual Customer, Investment APIs	Optional	S8	R4

Authentication and Security Module

ID	Requirement Description	Actors Involved	Priority	Sponsor De-livery	Public Re-lease
FR06	The system shall implement basic authentication for internal demonstrations	Individual Customer, Financial Advisor, Authentication Service	Important	S2	R1
FR08	The system shall offer secure authentication with OAuth2	Individual Customer, Financial Advisor, Authentication Service	Essential	S3	R1
FR22	The system shall implement regulatory compliance mechanisms for financial data	Individual Customer, Financial Advisor, Regulatory Compliance	Essential	S6	R3

Financial Analysis Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR02	The system shall display basic categorization of financial transactions with simulated data	Individual Customer, AI Reasoning Engine	Essential	S1	R1
FR05	The system shall demonstrate simple insights on spending patterns (with mocked data)	Individual Customer, AI Reasoning Engine	Essential	S2	R1
FR12	The system shall generate personalized insights on spending habits using AI	Individual Customer, AI Reasoning Engine	Important	S3	R2
FR20	The system shall provide financial position forecasts based on historical data	Individual Customer, AI Reasoning Engine	Desirable	S6	R3
FR30	The system shall provide benchmark metrics comparing the user's financial situation with peers	Individual Customer, AI Reasoning Engine	Optional	S8	R4

Visualization and Interface Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR03	The system shall provide a simple dashboard with spending visualization by category	Individual Customer	Essential	S1	R1
FR17	The system shall offer interactive financial data visualizations	Individual Customer	Important	S5	R2
FR26	The system shall provide a specialized interface for financial advisors	Financial Advisor	Desirable	S7	R3

Chatbot and Interaction Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR04	The system shall implement a functional chatbot prototype with basic predefined commands	Individual Customer, AI Reasoning Engine	Essential	S4	R1
FR09	The system shall respond to direct financial queries via chatbot with real data	Individual Customer, AI Reasoning Engine	Essential	S4	R1
FR28	The system shall integrate with voice assistants for financial queries	Individual Customer, AI Reasoning Engine	Optional	S8	R4

AI & Insights Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR13	The system shall send alerts for unusual spending patterns	Individual Customer, AI Reasoning Engine	Important	S4	R2
FR15	The system shall offer basic recommendations to improve financial health	Individual Customer, AI Reasoning Engine	Important	S4	R2
FR23	The system shall suggest investment opportunities based on user profile	Individual Customer, AI Reasoning Engine, Investment APIs	Desirable	S7	R3

Financial Planning Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR11	The system shall allow defining simple financial goals via web interface	Individual Customer	Important	S4	R2
FR16	The system shall allow the creation and monitoring of basic budgets	Individual Customer	Important	S5	R2

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR24	The system shall provide debt management strategies with payment simulations	Individual Customer, AI Reasoning Engine	Desirable	S7	R3
FR29	The system shall offer retirement planning tools	Individual Customer, AI Reasoning Engine	Optional	S8	R4

Monitoring and Reporting Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR25	The system shall generate periodic financial health reports	Individual Customer, AI Reasoning Engine	Desirable	S7	R3

Collaboration Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR19	The system shall implement secure data sharing with financial advisors	Individual Customer, Financial Advisor	Desirable	S6	R3

Financial Education Module

ID	Requirement Description	Actors Involved	Priority	Sponsor Deliv- ery	Public Re- lease
FR21	The system shall integrate contextualized educational content on financial concepts	Individual Customer, Financial Education Content	Desirable	S6	R3

Delivery Legend

Sponsor Deliveries (Internal Demonstrations)

- **S1:** Initial demo with simulated data and basic visualization (2-3 weeks)
- **S2:** Chatbot prototype and insights with simulated data (+ 2-3 weeks)
- **S3:** Integration with real data and complete authentication (+ 3-4 weeks)
- **S4:** Financial goals and personalized insights (+ 2-3 weeks)
- **S5:** Budgets and advanced visualizations (+ 2-3 weeks)
- **S6:** Advisor sharing and forecasts (+ 3-4 weeks)
- **S7:** Advanced recommendations and reports (+ 3-4 weeks)
- **S8:** Specialized features (+ 4 weeks)

Public Releases

- **R1:** MVP with essential functionalities (after S3)
- **R2:** Version with planning and advanced insights (after S5)
- **R3:** Version with collaboration and financial education (after S7)
- **R4:** Version with specialized features (after S8)

Priority Definition

- **Essential:** Core functionality required for the system to operate successfully
- **Important:** Functionality that adds significant value but is not critical for initial operation
- **Desirable:** Functionality that enhances the user experience and adds competitive advantage
- **Optional:** Additional features that may be developed if resources permit

Non-Functional Requirements

Security and Compliance

ID	Requirement Description	Priority	Rationale
NFR01	The system shall comply with financial data regulations including GDPR, PSD2, CCPA, and local banking regulations	Essential	Regulatory compliance is mandatory for financial systems
NFR02	The system shall secure all financial data with encryption at rest and in transit using industry-standard protocols (TLS 1.3+, AES-256)	Essential	Financial data protection is critical for user trust and regulatory compliance
NFR03	The system shall implement multi-factor authentication for all account access	Essential	Protects against unauthorized access to sensitive financial information

ID	Requirement Description	Priority	Rationale
NFR04	The system shall maintain an immutable audit trail of all data access and changes	Essential	Required for regulatory compliance and security incident response
NFR05	The system shall implement role-based access control for internal administrators and customer support	Important	Ensures principle of least privilege for system operations
NFR06	The system shall undergo quarterly security assessments and penetration testing	Important	Proactively identifies security vulnerabilities
NFR07	The system shall anonymize data for AI training and analytics to protect user privacy	Important	Ensures proper data handling while enabling advanced features

Performance and Scalability

ID	Requirement Description	Priority	Rationale
NFR08	The system shall respond to user interactions within 1 second under normal load	Essential	Ensures responsive user experience
NFR09	The system shall maintain 99.9% uptime during business hours and 99.5% during non-business hours	Essential	Financial management requires high availability
NFR10	The system shall scale to handle at least 100,000 concurrent users	Important	Supports business growth objectives
NFR11	The system shall process API integrations with financial institutions with maximum latency of 3 seconds	Important	External integrations should not significantly impact user experience
NFR12	The system shall support horizontal scaling for all stateless components	Important	Enables cost-effective scaling during peak usage
NFR13	The system shall limit batch processing operations to non-peak hours	Desirable	Minimizes impact on interactive user experience
NFR14	The system shall optimize data queries to complete within 2 seconds for 95% of requests	Important	Ensures consistent performance for data-intensive operations

Reliability and Resilience

ID	Requirement Description	Priority	Rationale
NFR15	The system shall recover from failures within 5 minutes (RTO = 5 min)	Essential	Minimizes service disruption
NFR16	The system shall limit data loss during failures to a maximum of 1 minute of transactions (RPO = 1 min)	Essential	Protects critical financial data
NFR17	The system shall implement circuit breakers for all external API dependencies	Important	Prevents cascade failures when external services fail
NFR18	The system shall maintain redundant data storage with automated failover	Important	Ensures data availability even during infrastructure failures
NFR19	The system shall gracefully degrade functionality when dependent services are unavailable	Important	Maintains core functionality during partial outages
NFR20	The system shall implement comprehensive error logging and monitoring	Important	Enables rapid troubleshooting and incident response

Usability and Accessibility

ID	Requirement Description	Priority	Rationale
NFR21	The system shall be compatible with major web browsers (Chrome, Firefox, Safari, Edge) and mobile platforms (iOS, Android)	Essential	Ensures broad user access
NFR22	The system shall be accessible according to WCAG 2.1 level AA standards	Important	Makes the system usable for people with disabilities
NFR23	The system shall support internationalization with at least 5 major languages	Important	Enables global user base
NFR24	The system shall support multiple currencies and financial formats	Important	Accommodates international financial systems
NFR25	The system shall provide a consistent user experience across devices with responsive design	Important	Ensures usability across different screen sizes
NFR26	The system shall allow customization of dashboards and reports	Desirable	Enhances user engagement through personalization
NFR27	The system shall provide clear error messages and recovery options for user interactions	Important	Improves user experience during error conditions

AI and Data Quality

ID	Requirement Description	Priority	Rationale
NFR28	The AI components shall provide explanations for financial recommendations	Essential	Builds trust and helps users understand financial advice
NFR29	The system shall maintain at least 95% accuracy in transaction categorization	Important	Ensures reliable financial insights
NFR30	The system shall verify data quality and consistency during integration with financial institutions	Important	Prevents incorrect financial analysis
NFR31	The system shall retrain AI models monthly with user feedback and new financial data	Important	Maintains relevance and accuracy of insights
NFR32	The system shall identify and flag potential biases in AI recommendations	Important	Ensures fair and equitable financial guidance
NFR33	The system shall complete complex financial analysis operations within 10 seconds	Important	Enables comprehensive analysis with user experience

Integration and Extensibility

ID	Requirement Description	Priority	Rationale
NFR34	The system shall support standard financial data exchange formats (OFX, CSV, QFX)	Essential	Enables broad integration with financial institutions
NFR35	The system shall provide a documented API for third-party integrations	Important	Allows ecosystem development and extensions
NFR36	The system shall support OAuth 2.0 for secure third-party authorization	Important	Industry standard for secure API access
NFR37	The system shall support offline mode with limited functionality	Desirable	Enables basic usage when internet connectivity is limited
NFR38	The system shall implement API rate limiting and throttling to prevent abuse	Important	Protects system resources and ensures fair usage
NFR39	The system shall maintain backwards compatibility for APIs with deprecation periods of at least 6 months	Important	Provides stability for integrating services

Maintainability and Operations

ID	Requirement Description	Priority	Rationale
NFR40	The system shall maintain comprehensive monitoring with alerting for all critical components	Essential	Enables proactive issue detection and resolution
NFR41	The system shall support zero-downtime deployments for updates	Important	Minimizes service disruption during system updates
NFR42	The system shall implement automated backup procedures with regular testing	Essential	Protects against data loss scenarios
NFR43	The system shall use infrastructure-as-code for all environment provisioning	Important	Ensures consistent deployment across environments
NFR44	The system shall maintain development, staging, and production environments with parity	Important	Supports reliable testing and deployment procedures
NFR45	The system code shall maintain at least 80% test coverage	Important	Ensures reliable functionality and reduces regression bugs

Architecturally Significant Requirements (RAS)

ASR ID	ASR Description	Quality Attributes	Impact	Architectural Implications	Verification Approach
ASR1	Consolidated Financial Data View Aggregated and present unified view of financial data from multiple institutions	Inter-operability • Performance • Security	Essential	Modular backend architecture with API-first approach • Microservice decomposition for institution-specific adaptors • Event-driven communication between services • Multi-tier caching strategy • Secure credential storage and OAuth integration	- Integration testing for API contracts - Performance monitoring of data aggregation - Security compliance verification - End-to-end data flow validation

ID	ASR	Quality	Impact	Architectural Implications	Verification Approach
	Description	Attributes			
ASR-2	AI-Powered Financial Insights Analyze financial data using AI to generate personalized insights and recommendations	- Performance - Modifiability - Reliability	Essential	Separation of AI processing components from core backend • Service interfaces for AI model consumption • Asynchronous processing for computationally intensive tasks • Hybrid batch/real-time processing architecture • Standardized model deployment and versioning	- AI model quality metrics - Recommendation accuracy testing - Performance benchmarking - A/B testing framework for models
ASR-3	Multi-Channel User Experience Provide consistent experience across web and mobile with conversational interfaces	- Usability - Portability - Modifiability	Essential	Component-based UI architecture • Responsive design approach • Client-side state management • Consistent API consumption patterns • Centralized UI component library	- Cross-platform compatibility testing - Usability testing metrics - Performance profiling - Accessibility compliance checks
ASR-4	Horizontal Scalability Handle increasing user load with linear resource scaling	- Performance - Scalability - Availability	Important	Stateless service design • Distributed caching architecture • Database sharding strategy • Asynchronous processing for intensive operations • Load balancing across service instances	- Load and stress testing - Scalability benchmarking - Resource utilization monitoring - Performance under load verification

ASR ID	ASR Description	Quality Attributes	Impact	Architectural Implications	Verification Approach
AS5	Security and Compliance Framework Secure financial data and comply with regulations	• Security • Compliance • Auditability	Essential	• Federated security architecture • Centralized authentication and authorization • Data encryption at rest and in transit • Comprehensive audit logging • Regulatory compliance verification pipeline	• Security penetration testing • Compliance certification • Security code scanning • Regular audit log reviews
AS6	Data Processing Architecture Process financial data in both real-time and batch modes	• Performance • Scalability • Modifiability	Important	• Real-time processing architecture • Data pipeline orchestration • Data warehouse integration • Predictive model training infrastructure • Data lineage tracking	• Data processing SLA monitoring • ETL pipeline testing • Data quality validation • Processing throughput metrics
AS7	Extensible Integration Framework Standardized approach for integrating with financial institutions	• Interoperability • Modifiability • Testability	Important	• Adapter-based integration architecture • Standardized API contracts • Versioned integration interfaces • Fault tolerance for external dependencies • Mock service framework for testing	• Integration contract testing • API compatibility verification • Mock-based integration testing • Third-party dependency monitoring
AS8	Explainable AI Architecture Provide transparent explanations for AI-generated recommendations	• Understandability • Trustworthiness • Auditability	Important	• Model explainability framework • Recommendation factor tracking • Visualization components for insights • Auditable decision pathways • Feedback collection system	• Explainability metrics • User comprehension testing • Regulatory compliance checks • Decision audit trail verification

ID	ASR	Quality	Impact	Architectural Implications	Verification Approach
	Description	Attributes			
9	Resilient System Design	• Maintain core functionality during partial outages	• Important	• Circuit breaker implementation • Fallback mechanism design • Graceful degradation strategy • Data consistency patterns • Service health monitoring	• Chaos engineering tests • Recovery time measurements • Degradation mode testing • Failover verification
	Continuous Delivery Pipeline	• Support frequent updates without service interruption		• Important • Zero-downtime deployment architecture • Infrastructure-as-code approach • Automated testing framework • Feature toggling infrastructure • Deployment environment parity	• Deployment success metrics • Release cycle time tracking • Rollback effectiveness testing • Feature flag verification
